

ABSTRACT

The invention relates to a laminated strip, in particular a decorative strip, comprising an upper layer (12) consisting of metal, preferably aluminium, whose upper face (22) is embossed with a structure in relief (18) and whose underside (24) is fixed to a reinforcement layer (14) consisting of plastic. During the production of the strip, the reinforcement layer (14) and the protective layer (16) are applied after the structure in relief (18) has been embossed on the upper layer (12).
